# Lab 5 Report

There weren't any real issues for me besides not reading the tenth slide that contained the ".cu" and "nvcc". After I included those, everything worked and I just had to change printf("%d\n", *d_A); to a for statement from 0 to N that printed printf("%d\n", d_A[i]); and a new line every 16 to make it more readable. This worked for my code.
